## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 12/13/2004 has been entered.

### ***Election/ Restriction***

- Claims 1-23 are pending in this application.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
    - I. **Claims 1-13**, drawn to a magnetic memory device, classified in class 257, subclass 295.
    - II. **Claims 14-23**, drawn to a method of making a magnetic memory device, classified in class 438, subclass 3.
  3. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be

Art Unit: 2818

made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Invention I would not necessarily imply unpatentability of Invention II, since the device of Invention I could be made by processes materially different from those of Invention II. For example, the device of Invention I could be formed by, for example, atomic layer deposition or stereo-lithographical deposition, or formed by, for example, patterning a magnetoresistive film to form the magnetoresistive element using a single mask, as opposed to “patterning the second mask layer into an element shape of a magnetoresistive element; patterning the first mask layer into the element shape by using the patterned second mask layer; patterning the magnetoresistive film into the element shape by using the patterned first mask layer to form the magnetoresistive element” as claimed in Invention II.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 2818

application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tu-Tu Ho whose telephone number is (571) 272-1778. The examiner can normally be reached on 6:30 am - 5:00 pm.
